POWERED BY OpenAI

GLYPHLINK

## Development Company: Punky Tiger Labs

Advanced technology company based in the United States.

Led by engineer Álvaro Mauricio López Zúñiga (Chile / USA)
expert in blockchain, applied AI and certification systems.

Exclusive owner of the patented process, standard and methodology.

## Intellectual property

GlyphLink® technology is protected under the following provisional patent applications filed with the USPTO:

- ✓ **Application No. 63/819,582 (June 7, 2025):** GlyphLink IA System for Visual Authentication and Anti-Counterfeiting.
- ✓ **Application No. 63/820,051 (June 9, 2025):** GlyphLink Certification Standard for Phigital Signature Anchoring and Tamper-Proof Verification.

## Legal scope:

The patents cover the complete method of tamper-proof certification that combines:

- ✓ GlyphLink invisible codes.
- ✓ Certified visual capture.
- ✓ Blockchain anchoring using NFTs.
- ✓ AI verification.

Applicable to both handwritten signatures on physical documents and physical products and consumer goods.

The process may not be reproduced, licensed, or legally implemented without explicit authorization from Punky Tiger Labs.

## What is GlyphLink®?

GlyphLink® is a new global certification standard that allows you to unambiguously and immutably link:

- ✓ A handwritten signature on a physical document > converted into a Phigital Signature NFT, verifiable by any third party.
- ✓ A physical product > unchangeable certificate of authenticity, validable with AI and blockchain.

### All through a proprietary process that combines:

- ✓ Invisible visual codes printed on the document or product.
- ✓ Certified signature/product capture with metadata.
- ✓ Blockchain (NFT) registry that acts as an immutable anchor.
- ✓ Advanced AI verification that guarantees authenticity and non-alteration.

## Why is it revolutionary?

It allows you to create a hybrid signature (physical + digital) that is forgery-proof. It offers governments, notaries, corporations, and consumers a unique system of universal validation.

- ✓ It can become the new global standard for:
- ✓ High-value legal contracts.
- ✓ Official and notarial documents.
- ✓ Certificates of ownership.
- ✓ Luxury products and consumer goods at high risk of counterfeiting.

It works for anyone: verification is done with a simple app, without requiring technical knowledge.

## Competitive Advantage

- ✓ Solid and broad patents already filed.
- ✓ Complete process protected, not legally replicable.
- ✓ Fully functional technology and in the process of being commercialized.
- ✓ Ability to set a global standard across multiple industries.

## Vision:

Become the universal layer of trust for the physical-digital world.
